Profile

Full-Stack Software Engineer with 2.11+ years of experience building production web applications and e-commerce solutions using Laravel, Vue.js, MySQL, and Redis. Experienced in REST APIs, payment integrations, cloud deployments, and scalable backend development. Focused on building maintainable, scalable software that solves real-world business problems.

Experience

Associate Software Engineer | Madgeek Pvt. Ltd. | 2023 – Present

Document Management System (Ongoing)

- Developing document upload, storage, and retrieval features using Laravel.
- Implementing role-based access control, document workflows, and backend APIs.
- Integrating DigitalOcean Spaces for secure cloud file storage and ongoing feature enhancements.

Travel & Booking System

- Developed booking workflows, user role management, and reporting features using Laravel.
- Implemented backend features and interactive frontend components using Blade and Vue.js.
- Delivered production bug fixes and feature enhancements for a live travel management system.

E-Commerce Development

- Customized and extended a Laravel-based e-commerce platform based on client requirements.
- Developed Shopify themes and implemented WooCommerce functionality.
- Integrated payment gateways, shipping APIs, and third-party services.

UPI Payment Reminder (Personal Project)

- Building a reminder system to track pending UPI payments and automate follow-up notifications.
- Implementing scheduling, background processing, and notification workflows using Laravel.

Technical Skills

- Languages: PHP, JavaScript, SQL, Core Java
- Frameworks: Laravel, CodeIgniter, Vue.js, jQuery
- Databases: MySQL, Redis
